- Control and informing people through different communication methods is unique;
- Everything in one application!
- Clear summaryk;
- Real Time;
- Is straightforward, so user friendly and easy to understand;
- Therefore the use of Time IT saves time and money;

Advantages, no. 1

Within an organisation Excel runbooks are often used, possibly supplemented with macros or via a Word document.
The advantages are determined in relation to this methods of working.

- Better validation and verification of the tasks and activities in time
    - Guaranteed consistent structure; Excel can be filled out at will
    - Parallel activities can be better recognised and managed
    - Planning takes into account the availability of employees
    - Qualitatively a better runbook
    - Work instructions can be linked to an activity
    - Remarks can be added to an activity

Advantages, no. 2

- Better insight into the status/progress of the implementation of the runbook
  - Dashboard
  - Reports
  - Gantt Chart

- Easier and better means of communication
  - SMS gateway linked to the runbook, which is the moment of communication and the target group, including variable or fixed texts, to be defined beforehand
  - Emails can be sent from the application, which is the moment of communication and the target group, including texts to be defined beforehand
  - Activities can be transferred to the Outlook agenda available to the overall coordinator and also to the people executing the runbook.

Advantages, no. 3

- Multiuser
    - Application can be used standalone or in one network and thus simultaneously by multiple people

- Better insight into the consequences of replanning, such as extension activities
    - During the recalculation of production times the application takes into account parallel activities and the availability of employees; currently this has to be performed manually
    - The application takes into account the frame in which the plan can be performed

Savings

✓ 70% Time saving during the creation of a runbook, using templates, multiuser, and basic stem data

✓ 35% less chance of an impairment/rollback in the performance by a better validation/verification beforehand

✓ 50% less chance of an impairment/rollback in the implementation by better monitoring and communication of the runbook

✓ 40% less chance of impairment/rollback due to replanning problems in the implementation of the runbook
